

## Invisalign

Invisalign treatment is the virtually invisible way to straighten your teeth by wearing a series of clear, removable aligners that gradually move your teeth into the desired position.

Invisalign aligners are clear so much less noticeable than traditional braces.

They are worn 22 hours per day and removed for eating & drinking and brushing & flossing the teeth.

The first step in the process is to make a consultation appointment.

From here a digital treatment plan is created using advanced 3D computer technology.

The aligners are custom made for your teeth.  
Each aligner is worn for 1-2 weeks.

Appointments are scheduled every 4-6 weeks for review until treatment is completed.

Treatment typically takes 4-8 months.
